CL04 - Local Variables

Variables

Declaration of a variable

<name>: <type> = <value>

students: int = 300

message: str = "Howdy!"

Update a variable

<name> = <new value>

students = 325

message = "See ya!"

Diagram

```python
1   def check_nums(nums: str) -> str:
2       my_val: int = 70
3       num: int = int(nums)
4       if num == my_val:
5           print("Correct!")
6       elif num < my_val:
7           print("Small number! " + nums)
8       else:
9           print("Big number! " + nums )
10      return nums
11
12  print(check_nums("75"))
```
